

SIDELAP SEAM GROMMETS

This is a grommet type fastener used to fasten the side laps between two Dipcraft Fiberglass panels. They are also used to attach a flashing member into a fiberglass panel in an area where there is no structural backing. Sidelap Seam Grommets have a hex head and are available in

3/8"x1"(stainless screw).

As the head is tightened, the grommet expands and provides an effective seal, as well as flexibility for normal expansion and contraction.
